

9. Look through your Euclid folders for one called `public.html`. If it's not there, create this folder now, and open it.
10. In the left-hand panel, you have a navigator for the folders on your own computer. Navigate to the folder where you put your `index.html` file.
11. Double-click on the file `index.html` to upload it into the Euclid folder `public.html`. Do the same thing with your digital photo.
12. Open a web browser, and enter the URL:

`http://euclid.colorado.edu/~youridentikey/`
or
`http://math.colorado.edu/~youridentikey/`

(Of course, put your identikey in the URL as indicated.) You should see your page show up!

Now *everyone* on the web can see your webpage!

Troubleshooting: If you get an error in your web browser that says you do not have permission to view the file, go into FileZilla and right-click on your `index.html` document, select "File Permissions", and allow the Public to Read the file.

Congratulations, you made a webpage! Here are some things you might want to put on it:

- Your name, office number, and email address
- Your help lab hours and/or office hours
- Your research interests and links to any papers or projects you've produced
- Courses you have taught and are currently teaching
- Links to other mathematicians or websites you find interesting
