Intro to Abstract Algebra

Dr. Smith's research is in Algebraic Number Theory. Free PDF is online! 1/20/26

- My name, pronouns, where I'm from, what I've found most interesting mathematically, what I'm interested in outside of math, how I feel about technology in class and what resources I use outside of class

We will be focusing on two main things

Groups
- "Set with one opperation that behaves nicely"

Rings
- "a set with two opperations that behaves nicely"

Where does solving equations make sense?
- we won't look at inequalities
- HW will be due ~~Wednesday~~ Thursday nights.
- Coming to class is an expectation.
- He's happy to give HW extensions if given in advance
- The HW load will be a bit intense, but it is meant to prepare me for the exams.

~ 60% of HW is for completeness, then ~ 40% on correctness.

- See blog post on grades as a prospective professor.
- Use whatever resources I want for my learning. Stack Exchange is good. Cite whatever resources I used. I don't need to if I talk to Gabby (the TA) or the professor.
- Avoid sterio types on who is and is not good at math. Be kind when you're correcting someone and work on being vulnerable. Treat them with respect.
- Scan and upload my notes to the professor after each class.
